ENV File

Backend:

Since we use mongodb for database and AWS s3 for files. We decide to store necessary information in the .env file in backend. The format looks like this:

```
DB_CONNECT = mongodb+srv:...
retryWrites= ...
TOKEN_SECRET = ...
AWS_BUCKET_NAME = ...
AWS_BUCKET_REGION = ...
AWS_ACCESS_KEY = ...
AWS_SECRET_KEY = ...
WHITE_LIST = ...
```

Frontend:

Our s3 server information

```
REACT_APP_DOMAIN = ...
REACT_APP_AWS = ...
```

SocketIO:

Socket port information

```
SOCKET_PORT: ...
```
